Forehead Lines

Frown Lines

Crow's Feet

Tear Trough

Naso Labial Folds

Perioral Lines

TMJ Grinding

Lip Enhancement

Marionette Lines

Mentalis Crease

What is Dento-Facial Aesthetics?

There is more to a beautiful smile than our teeth alone. Facial features including the lips, supportive soft tissues and the scores of facial muscles that activate when we express ourselves all interplay to create our own unique 'smile'.

A skilled aesthetic dentist also trained in dento-facial procedures not only revitalises and restores teeth, but can also use cosmetic injectables to complement them further by refining and enhancing the surrounding facial features.

Why Visit an Aesthetic Dentist for Treatment?

An experienced aesthetic dentist is already familiar with the anatomy of the face, the underlying muscles and concepts of aesthetically pleasing design which influence our perception of beauty, and how our mouth and other facial features balance in harmony.

Aesthetic dentists can also utilise cosmetic injectables in unique ways, such as reducing the appearance of dark spaces between teeth using dermal fillers on the gumline, and also relaxing the muscles responsible for grinding and clenching, which if left unaddressed may damage teeth and age the face.

About the Treatments

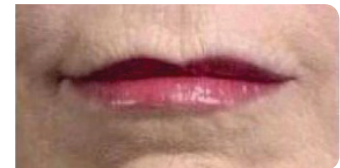

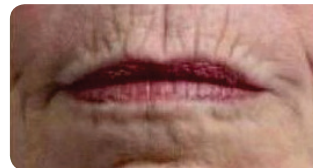

Dento-facial cosmetic treatments are safe and take only minutes to administer, requiring no downtime or recovery period. Results are noticeable almost immediately for fillers and within just a few days for anti-wrinkle treatments.

Composite bonding and dermal fillers can reduce 'dark triangles'

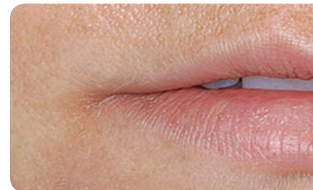

Lines are smoothed with targeted anti-wrinkle treatment

Perioral creases and labial folds are relaxed and softened

Reduce excess gum display by relaxing over-active upper lip

Lip enhancement achieved using dermal fillers

Rejuvenate the entire face and experience a youthful, refreshed and relaxed appearance.
